

# Match Me / Welcome Page

This is our welcome page! Titled "Match Me".

There are two tabs at the bottom screen:

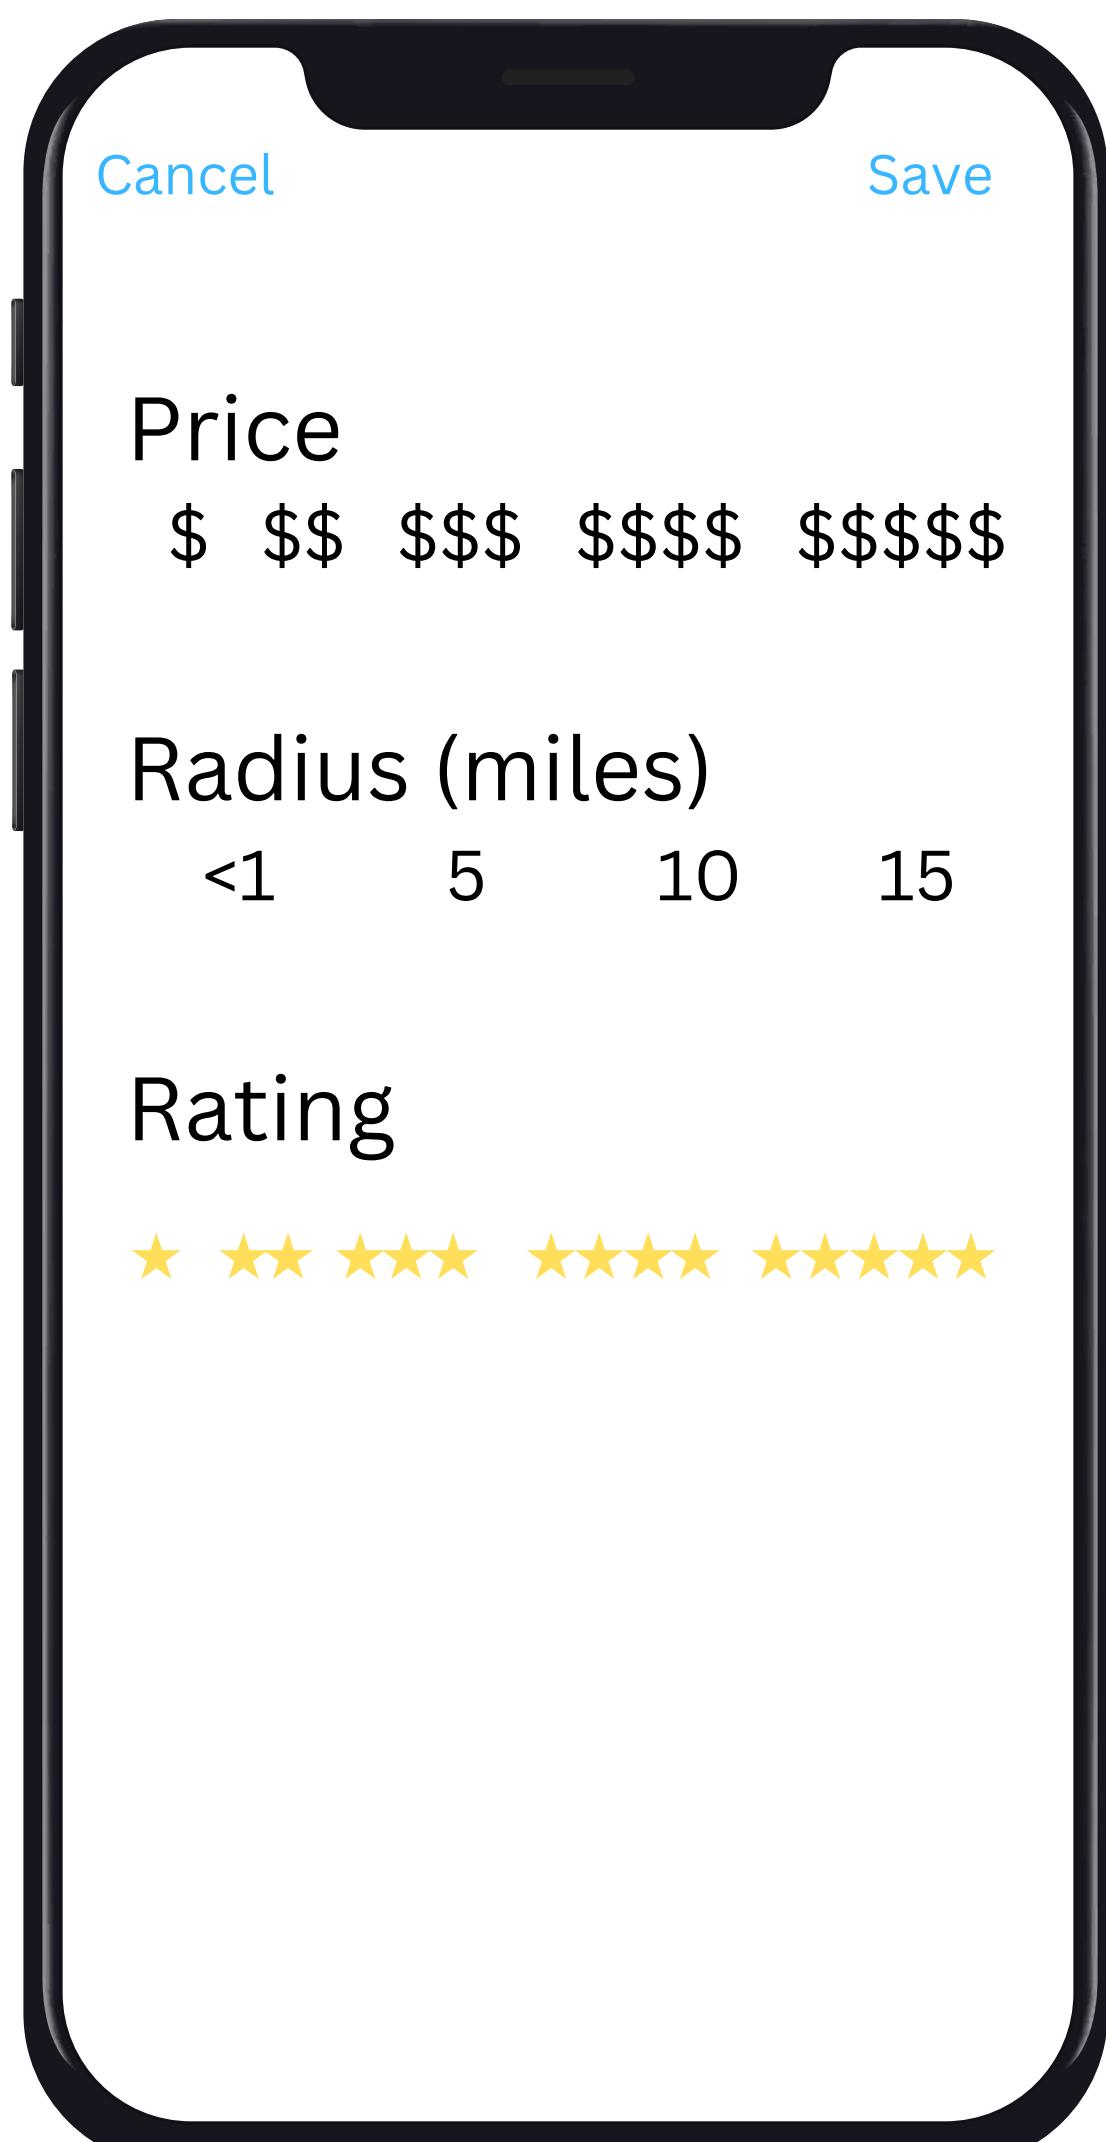

"Match Me" tab, and "Match Info" tab

There is a form at the top right titled "Edit Preferences." This takes you to "Edit Preferences Form"

(We will build app functionality without preferences first, and then hopefully add preferences)

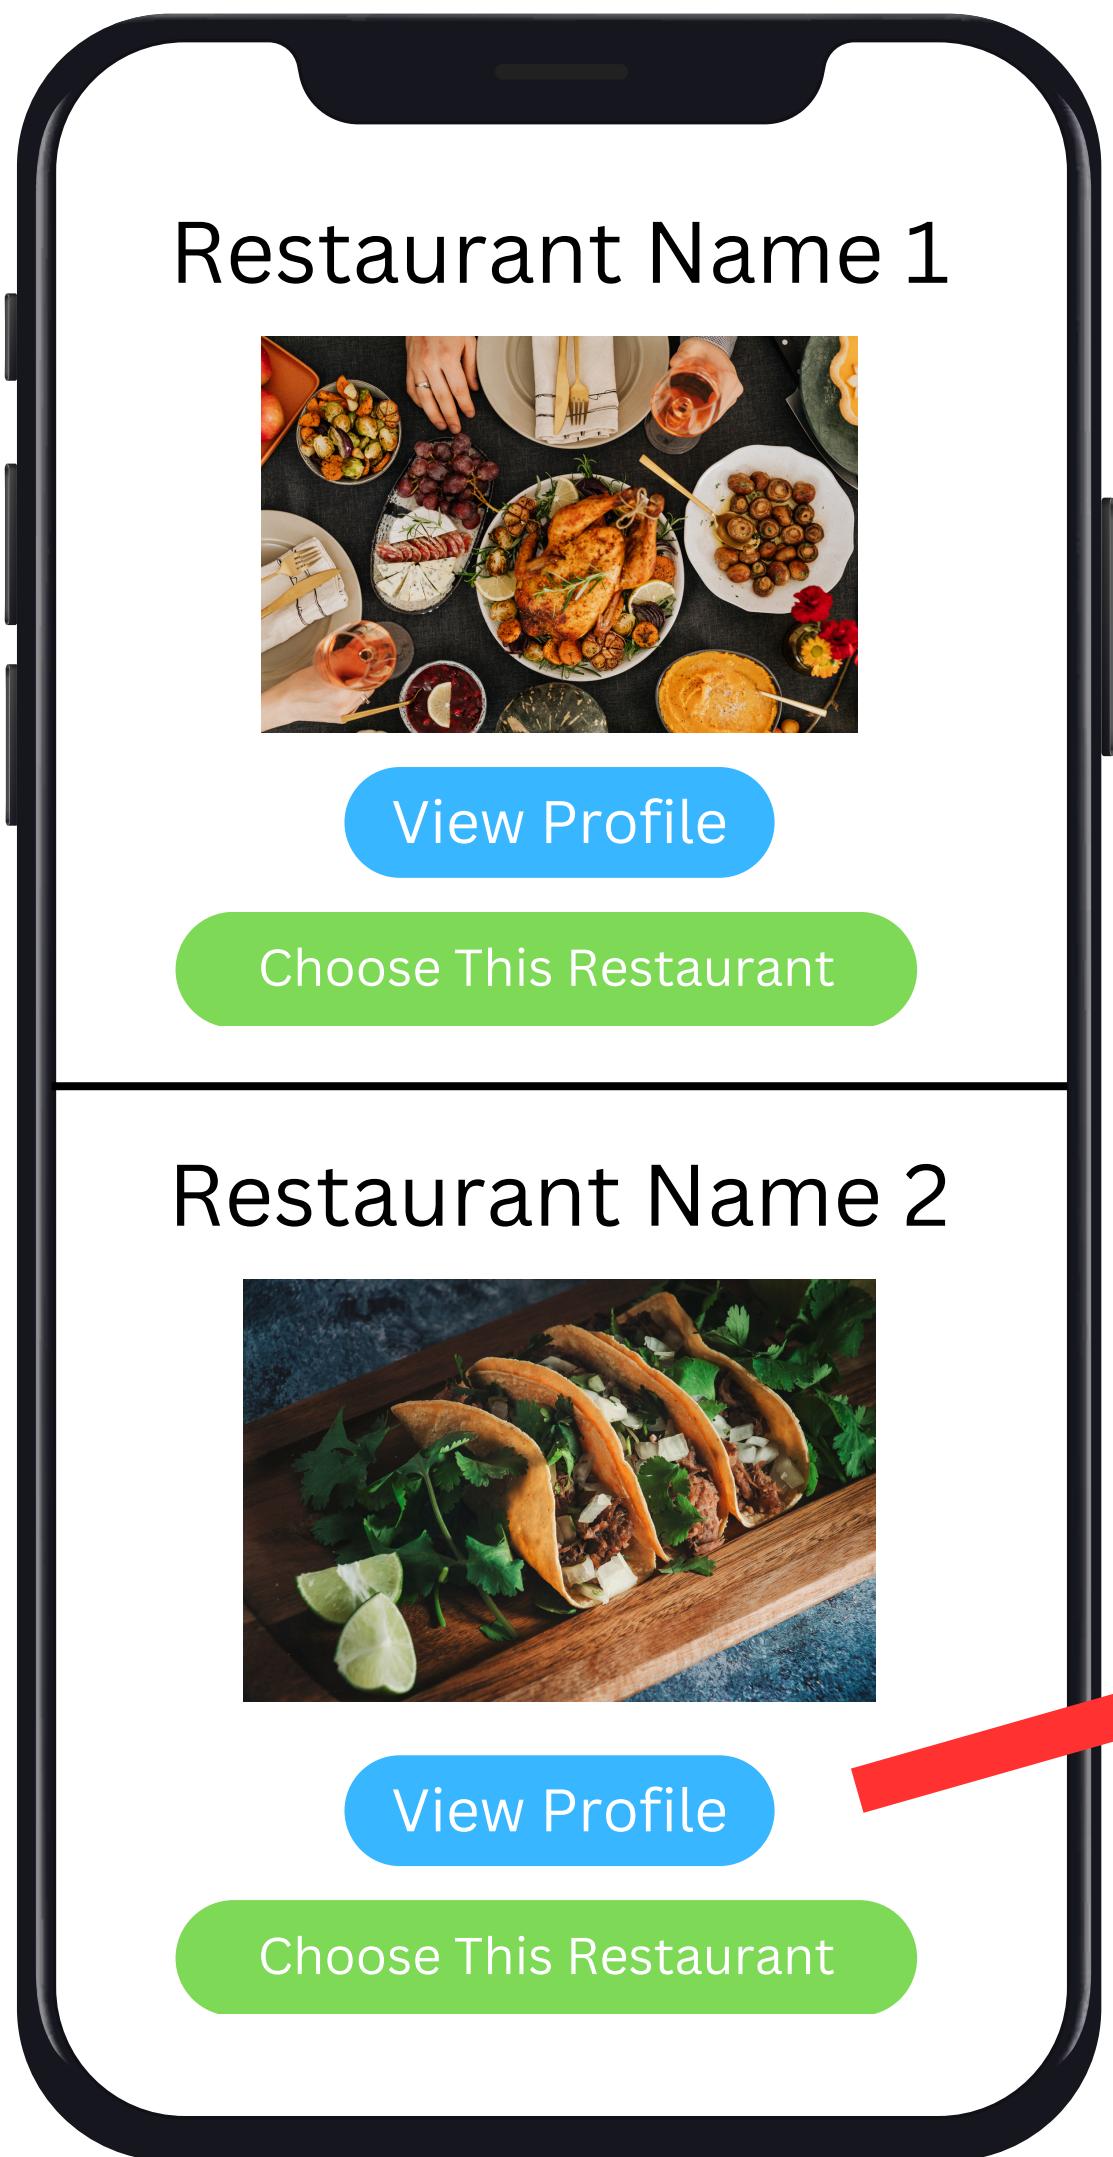

There is a button called "Match Me" that takes you to "Menu Match Competition."

## Edit Preferences Form

In "Edit Preferences," you can choose your preferred price range, radius, and rating. The default is no preferences.

# Menu Match Competition

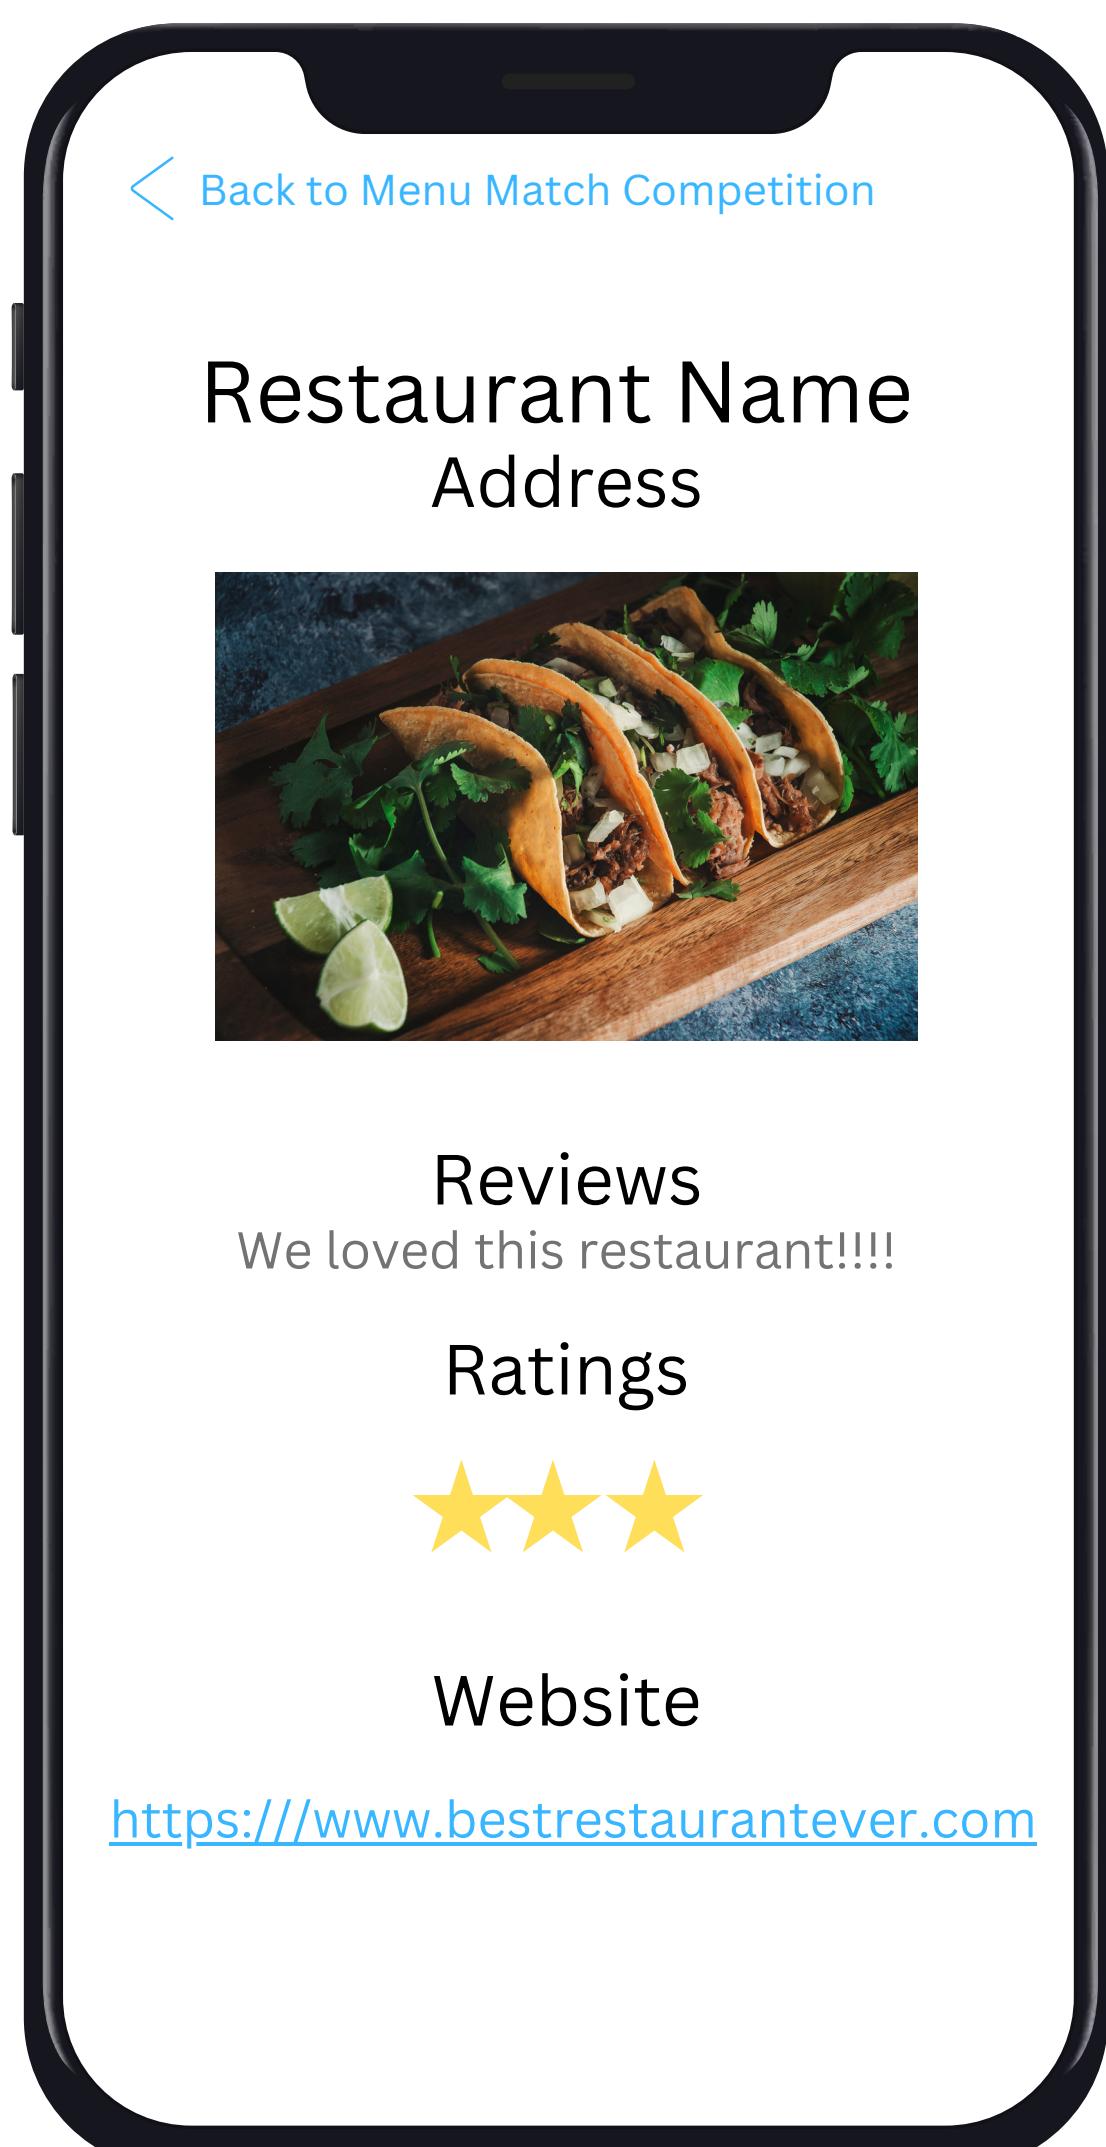

Our API search will return a list of restaurants. We will choose 6 restaurants (or fewer if there are not 6 restaurants that match the preferences) that will be part of the menu matching competition.

We then display two restaurants at a time, and the user gets to choose their favorite, until they have seen all 6 restaurants and have found their winner.

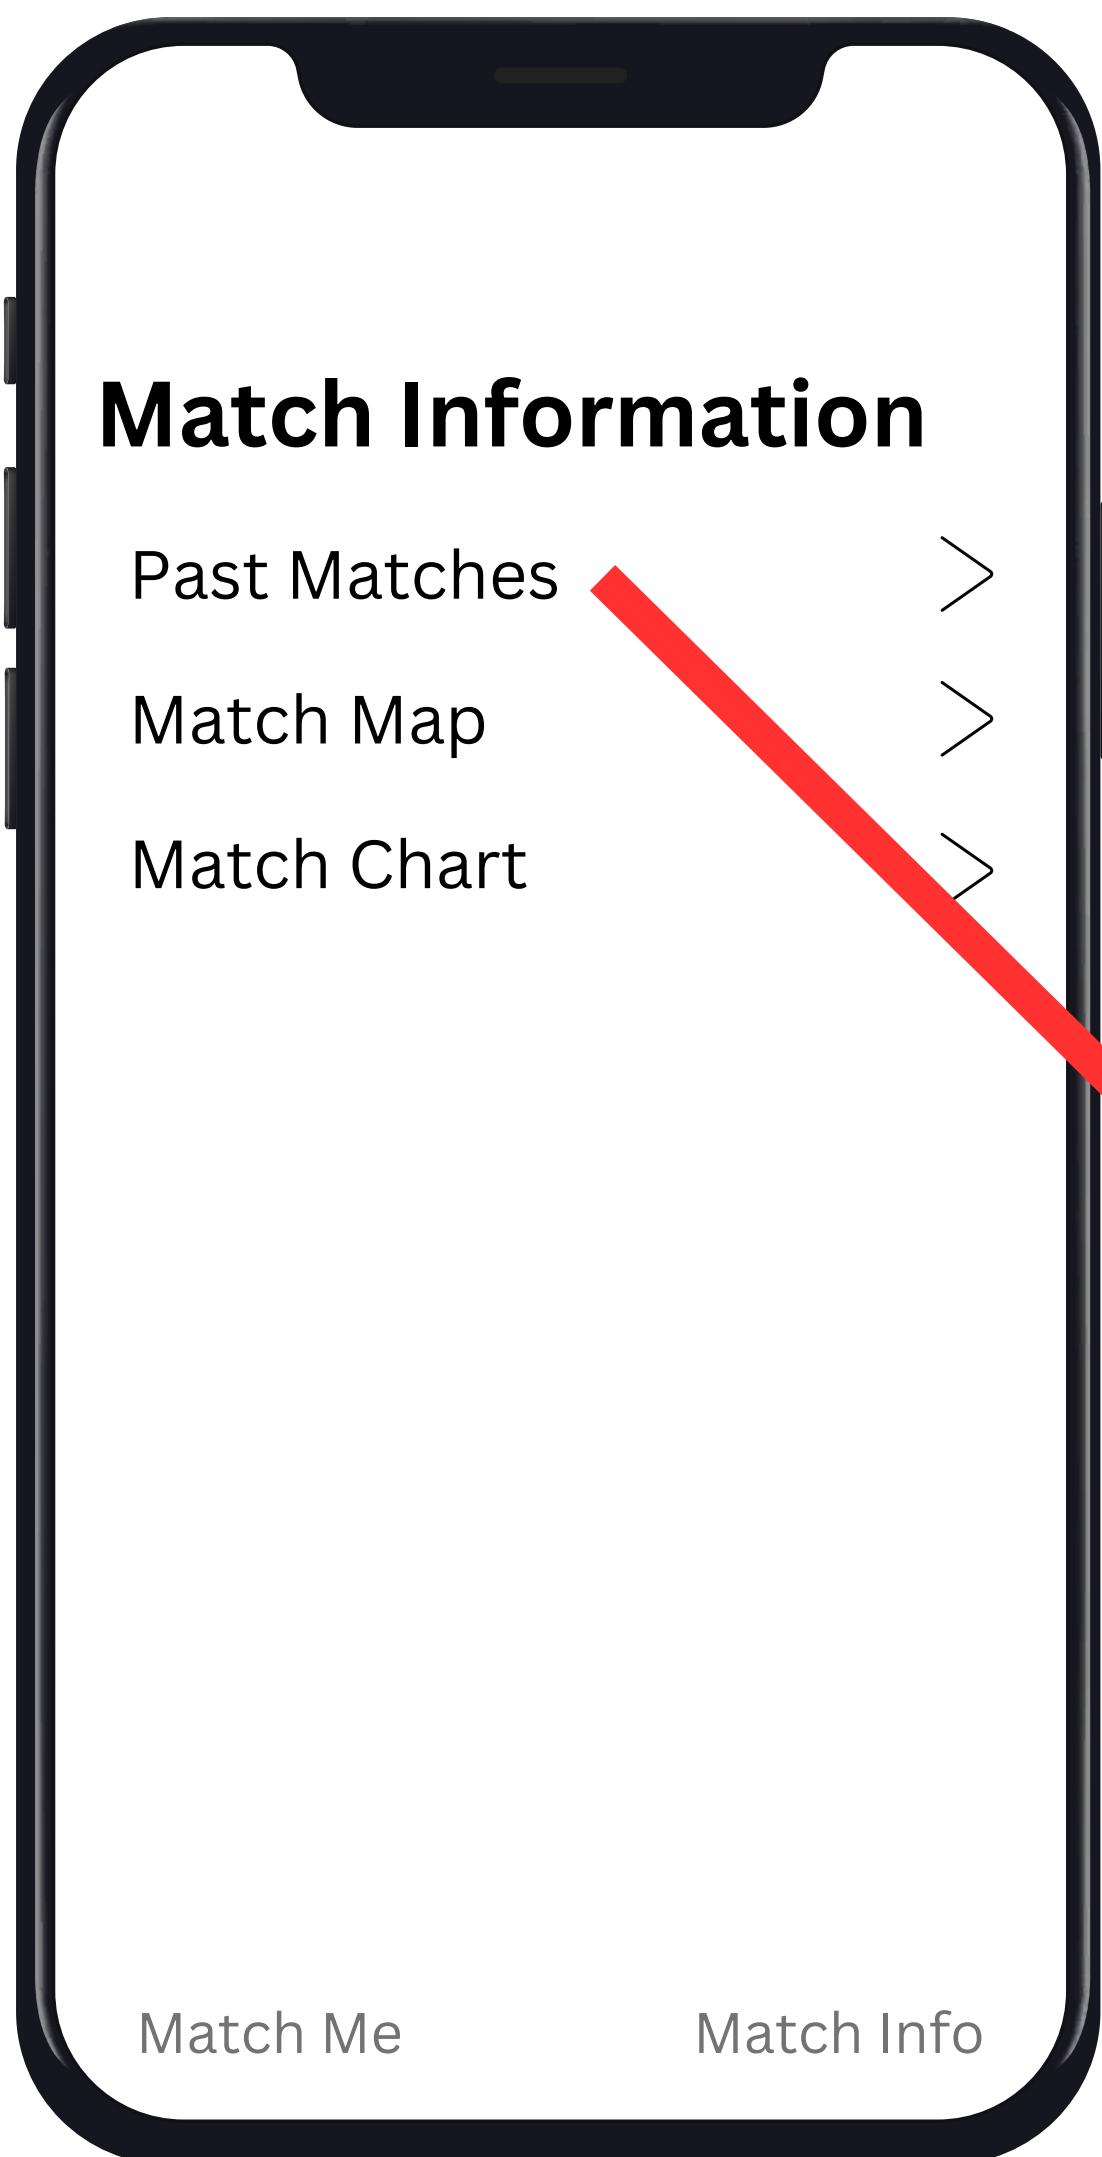

The user will be able to view the restaurants' profiles which will include a restaurant's information.

## Restaurant Profile

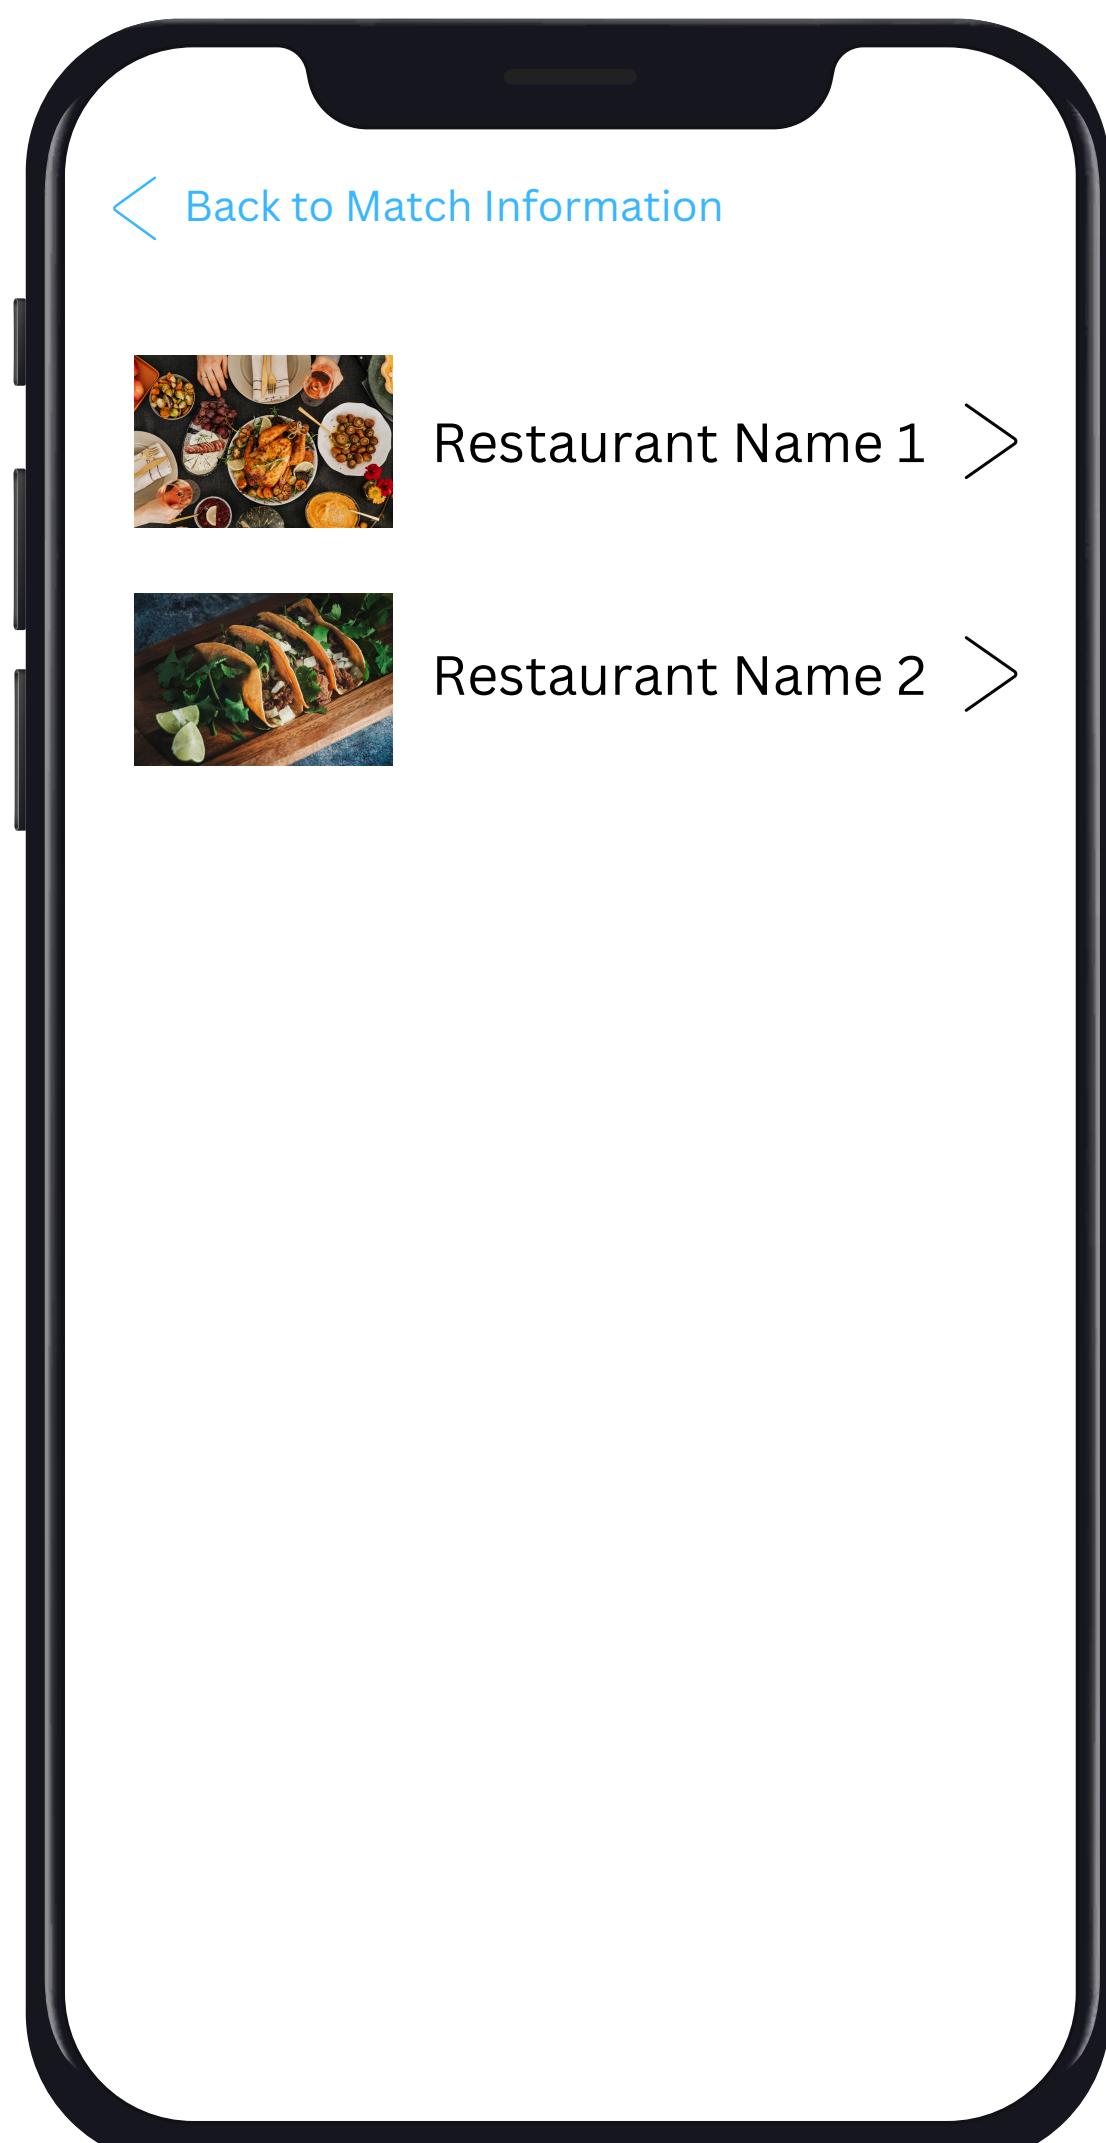

Restaurant profile will be a scrollable view that displays the restaurant's name, address, image, reviews, ratings, and a link to the restaurant's website

# Match Info

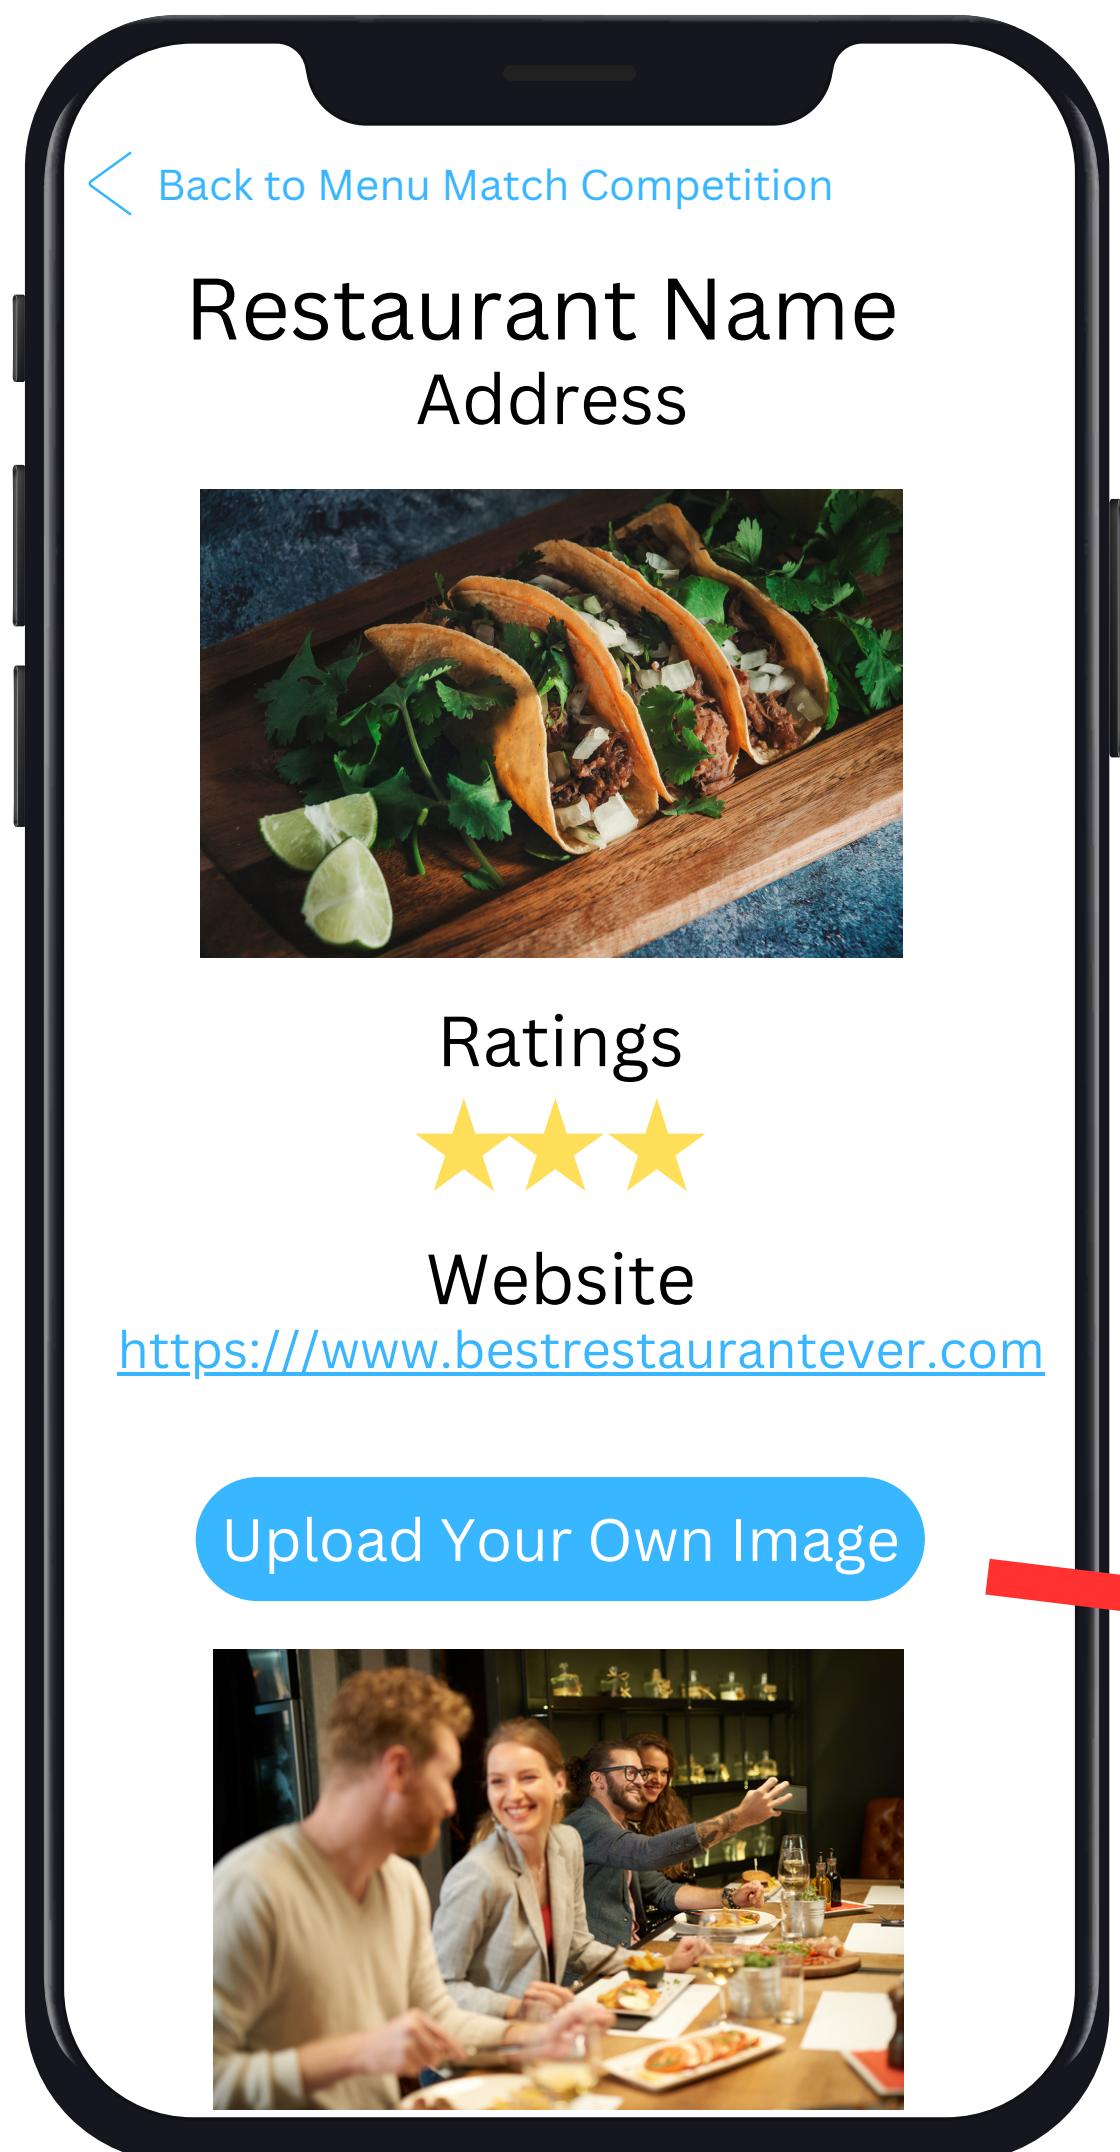

The Match Info tab will allow the user to navigate to 3 different pages: "Past Matches," "Match Chart," and "Match Map"

## Past Matches

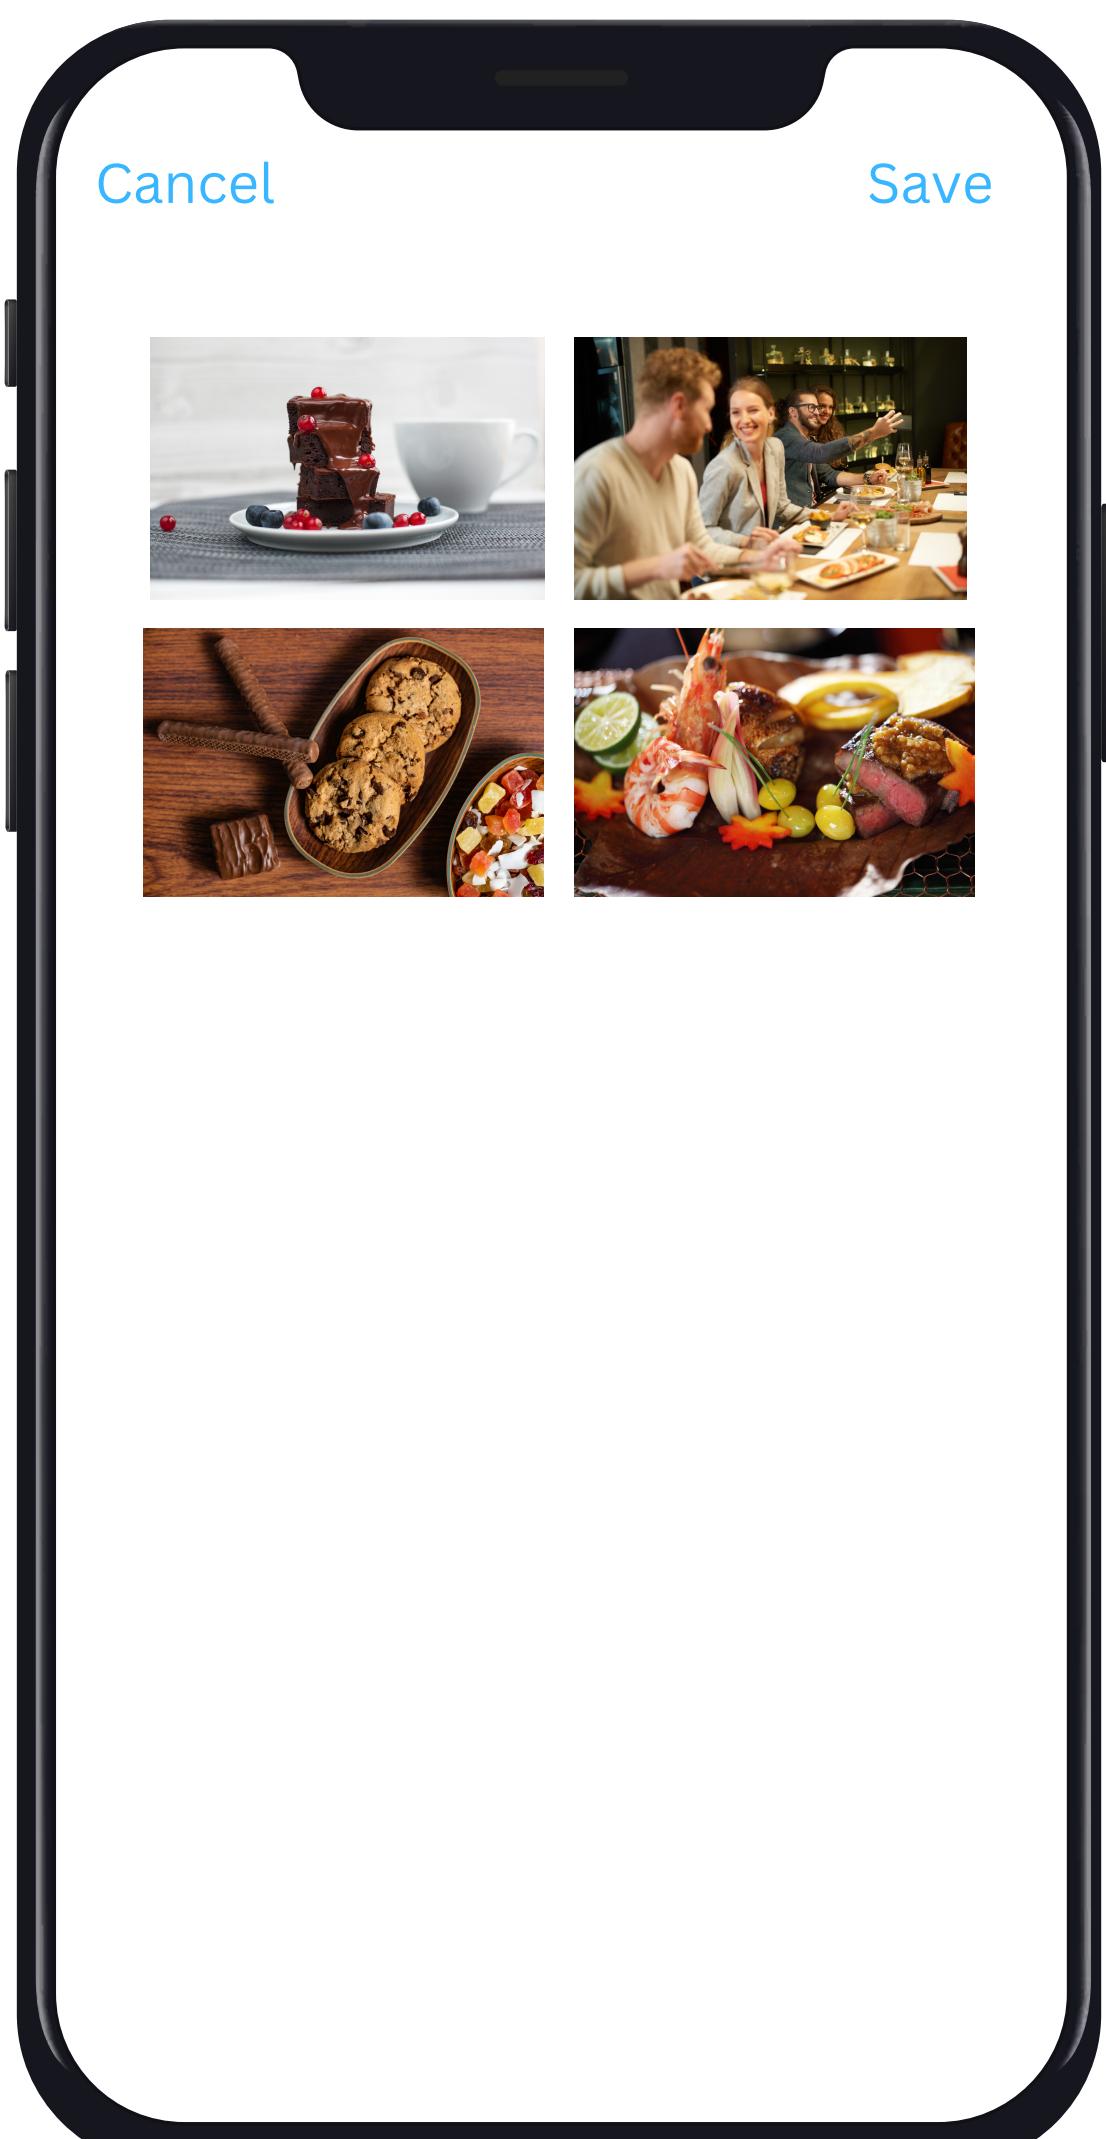

Past Matches will display all your past matches. The user will be able to see a profile ("Past Match Details") for each past match and go back to the "Match Information" screen.

# Past Match Details

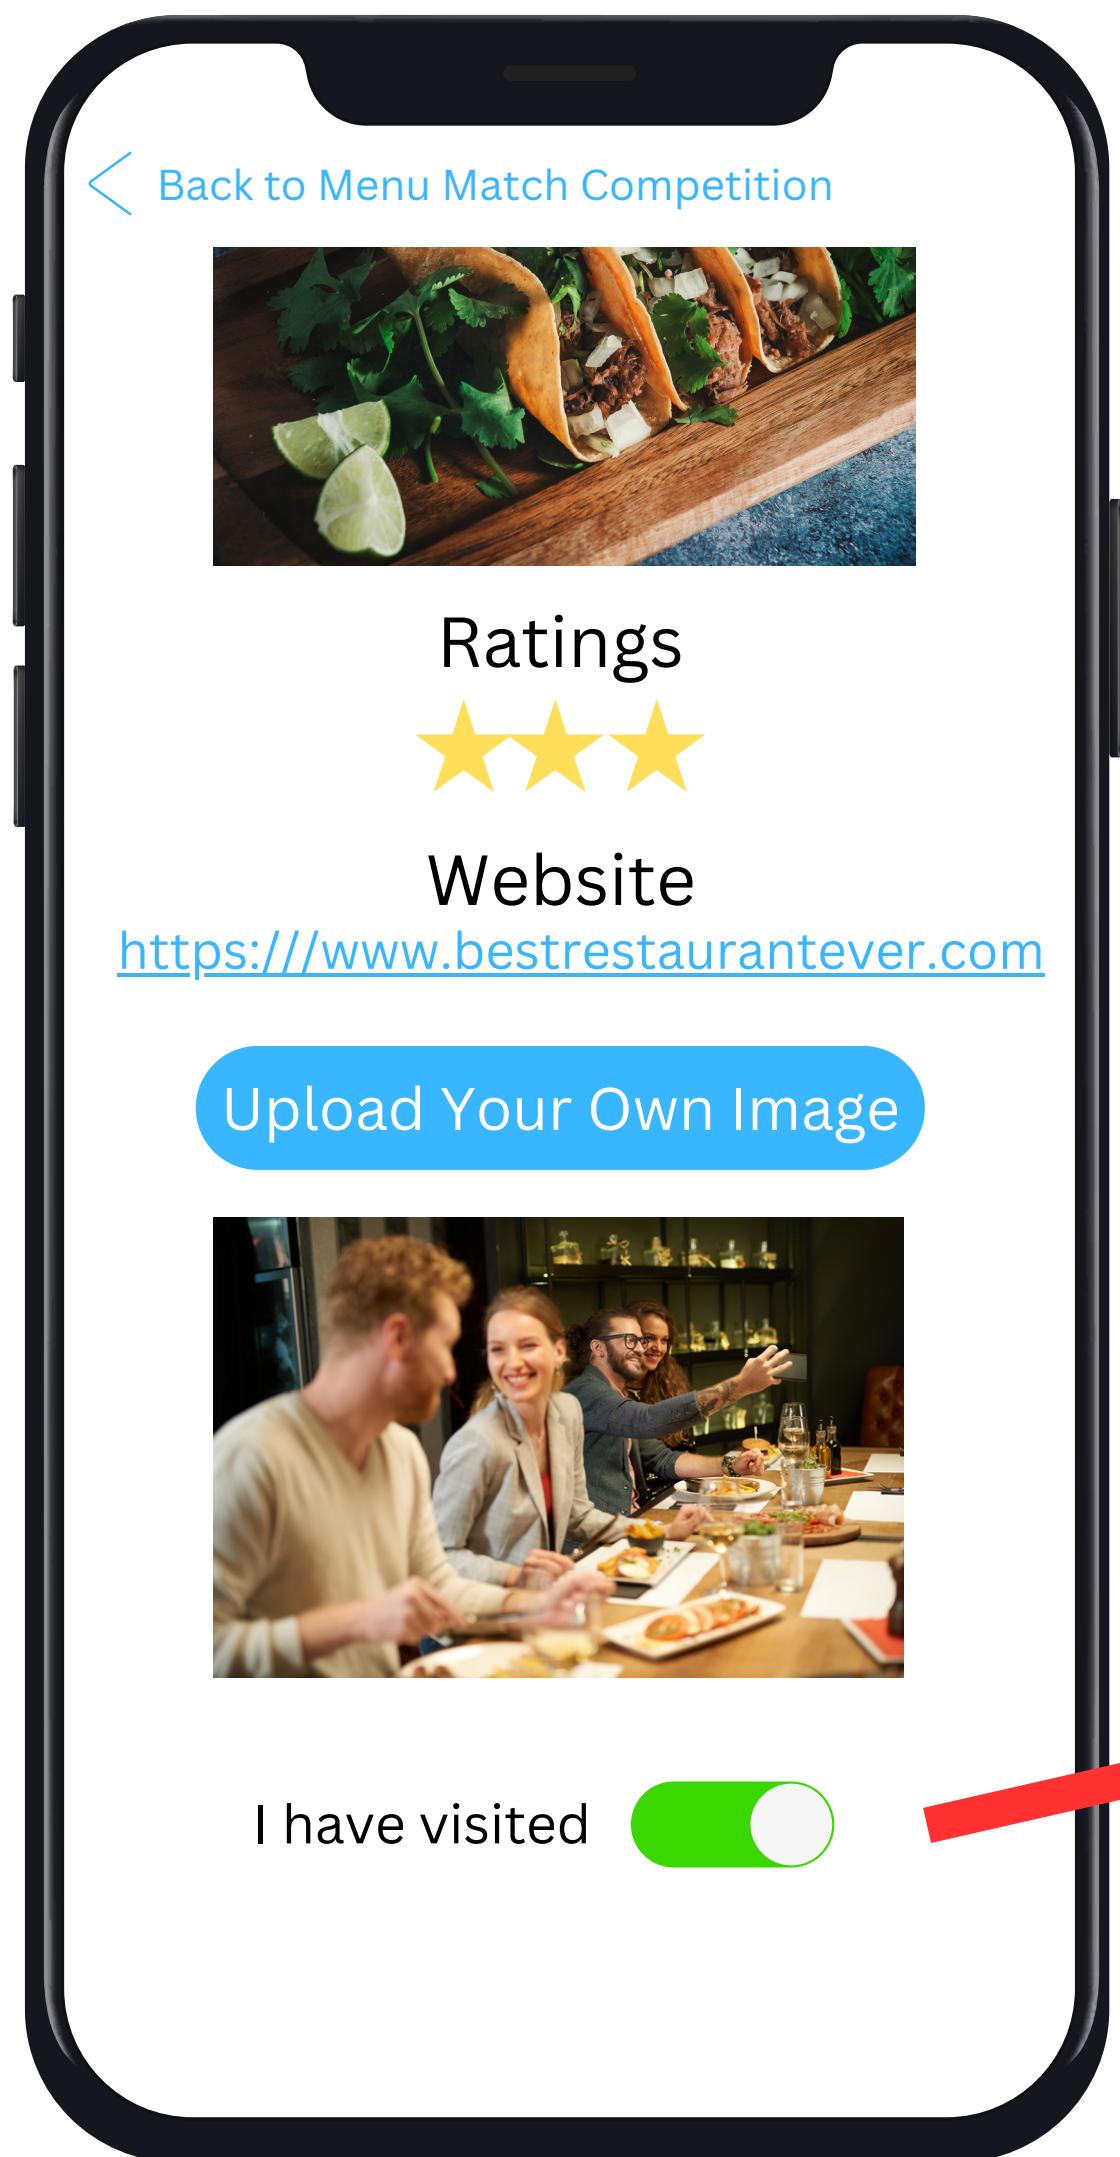

Past Match Details will display a previously matched restaurant's information. Also, the user will be able to upload their own photo and indicate if they have visited the restaurant (See next page).

## Image Picker

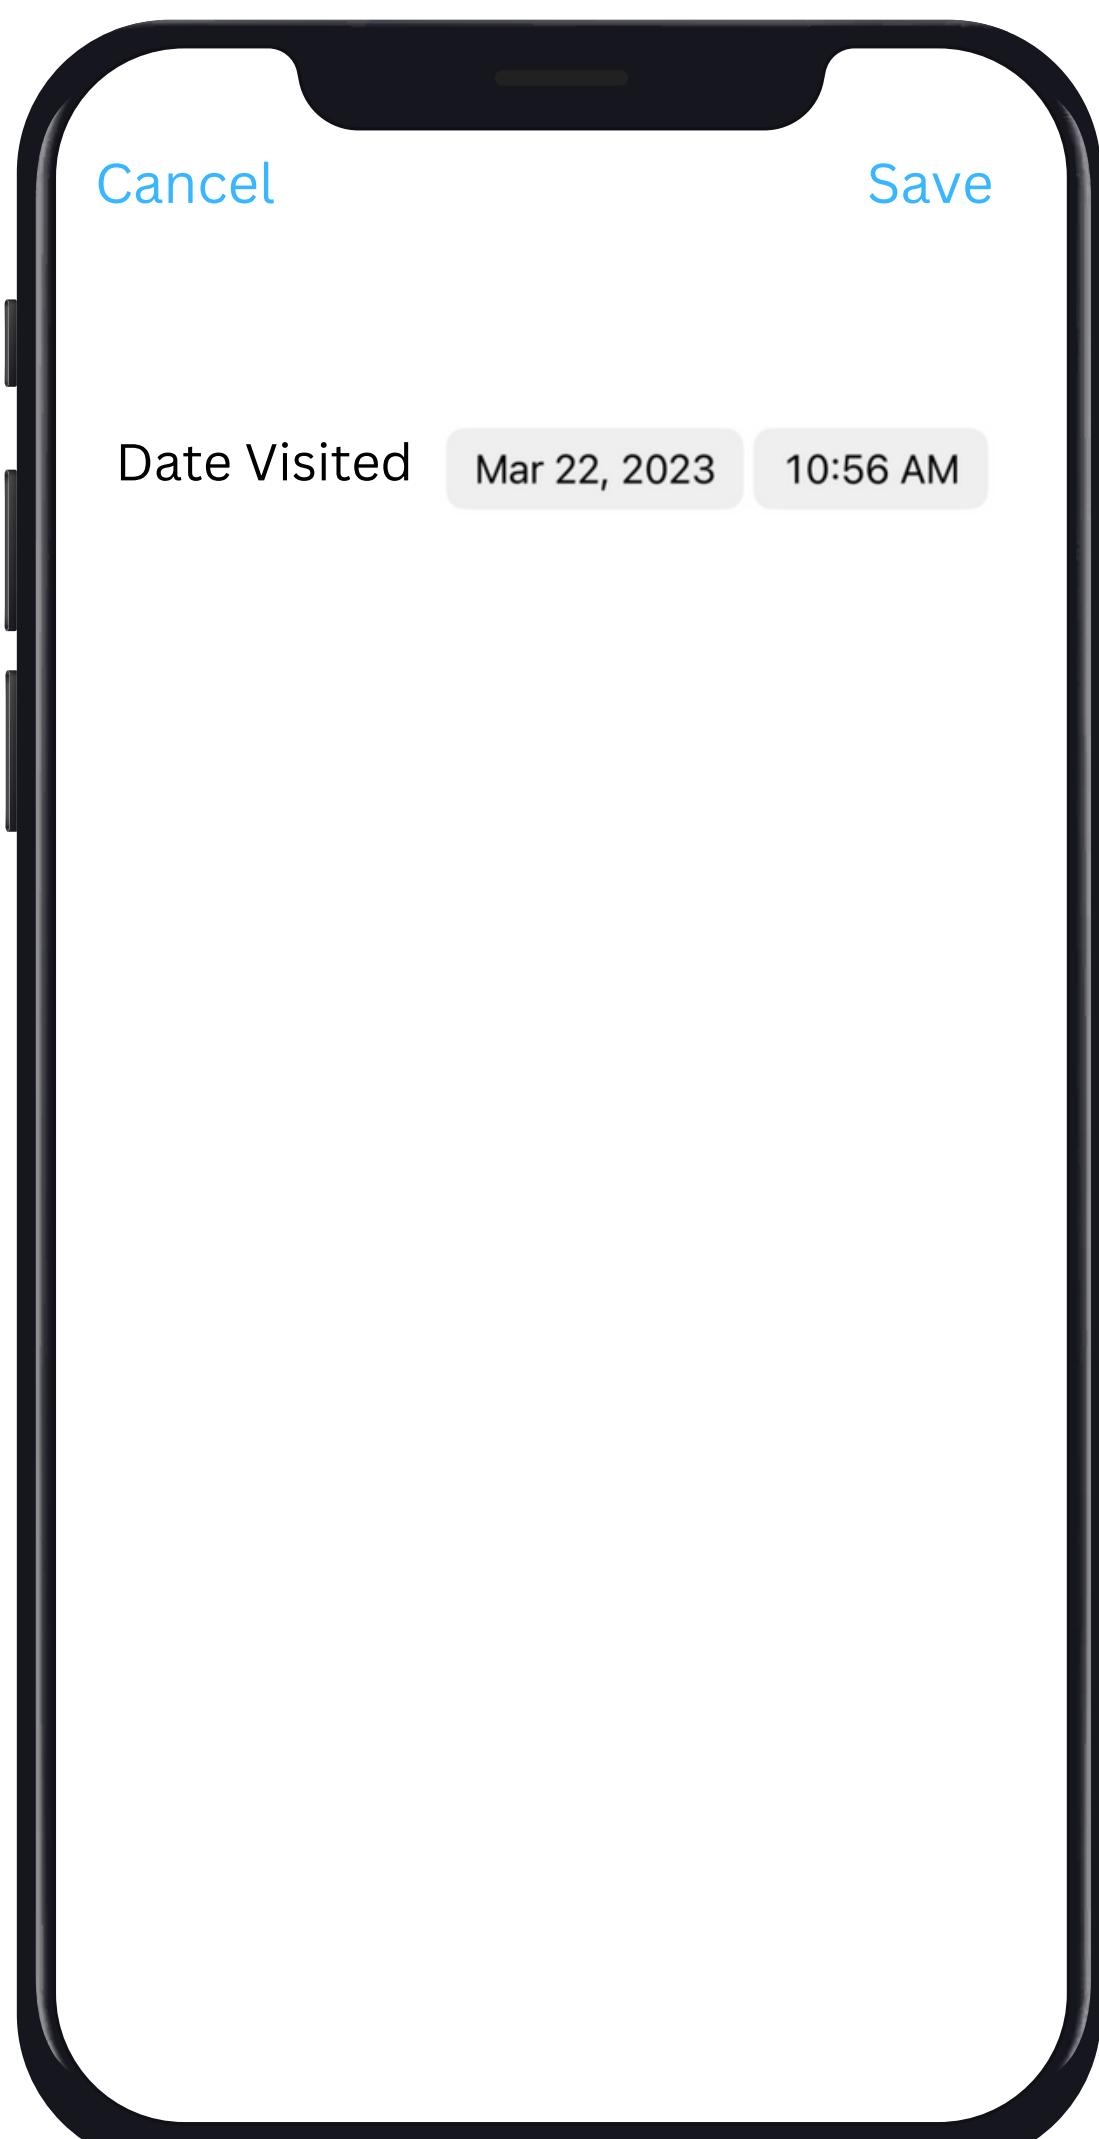

The user will be able to choose a photo from their library to add to the Past Match Details View

# Past Match Details

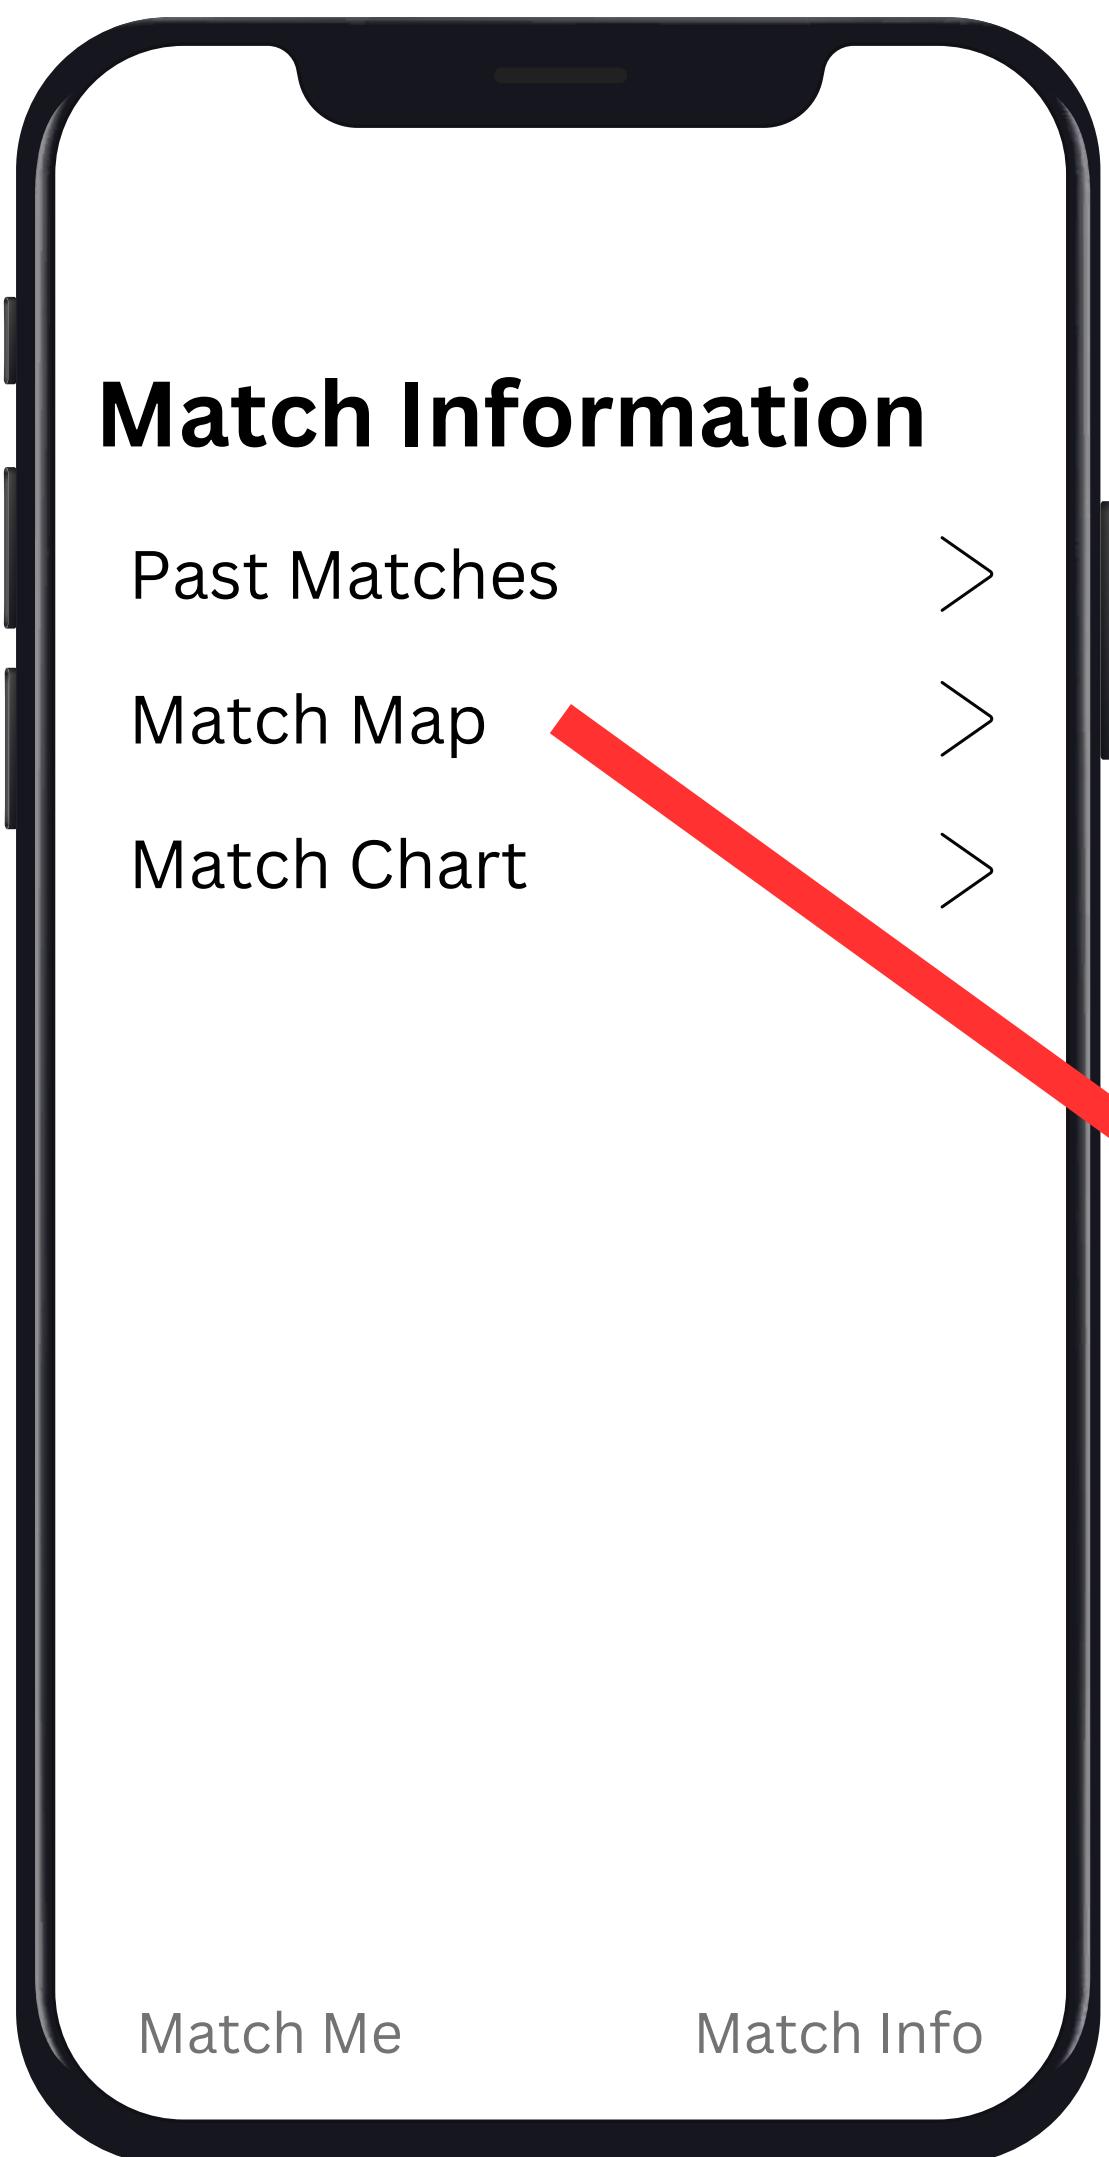

"I have visited" Toggle: Allows the user to indicate they have visited the restaurant. The toggle will trigger a pin to be dropped on the Map, so when a user clicks on "Match Map" they will see all restaurants they have visited.

## Add Date Form

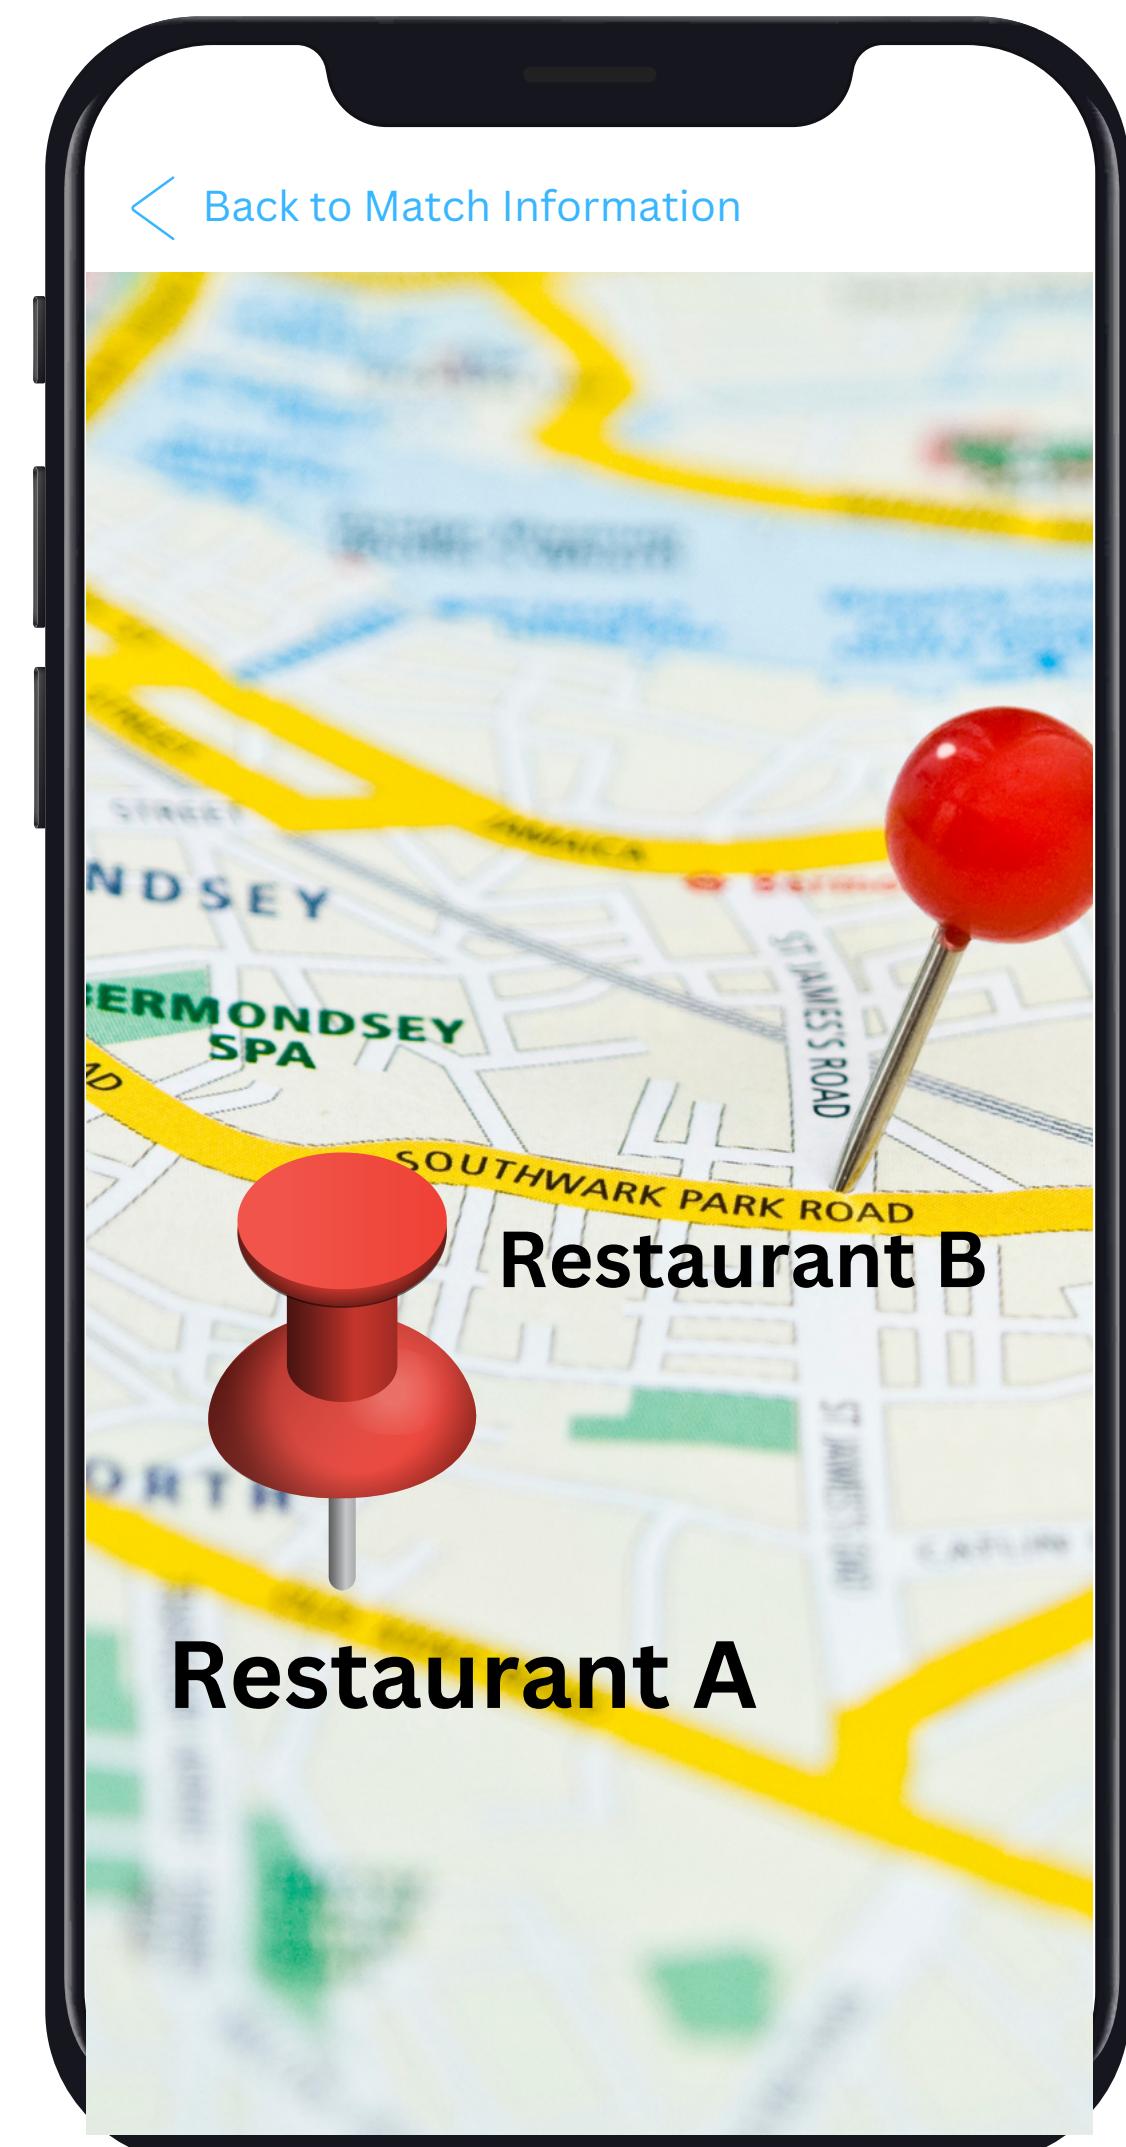

When the user uses the "I have visited" toggle, a form will appear that will allow them to choose the date they visited the restaurant.

# Match Info

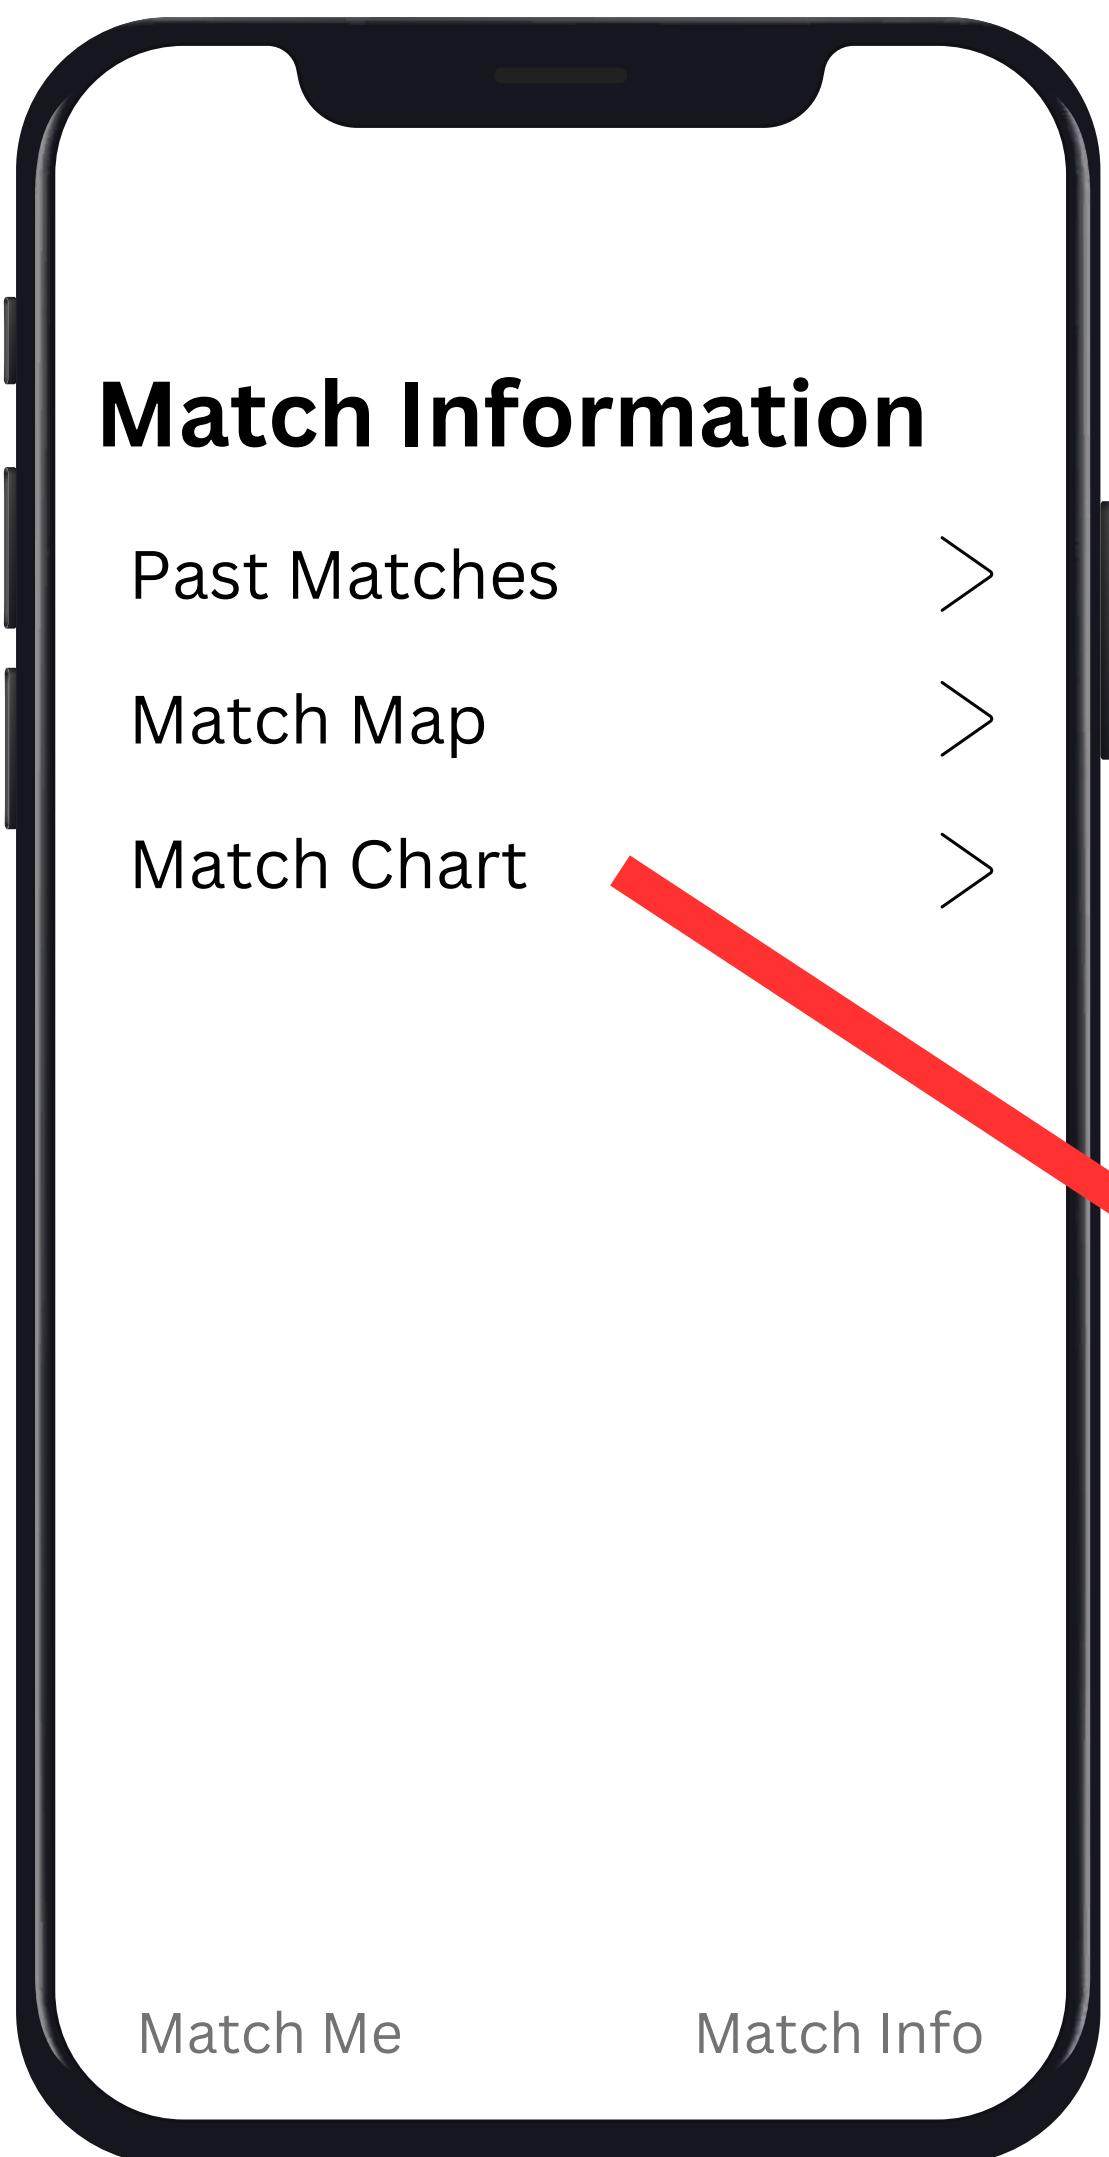

The Match Info tab will allow the user to navigate to 3 different pages: "Past Matches," "Match Chart," and "Match Map"

## Match Map

The Match Map will have pins of all the restaurants the user has visited. The user cannot add pins, they will only be able to view the pins of restaurants they have marked as visited

# Match Info

The Match Info tab will allow the user to navigate to 3 different pages: "Past Matches," "Match Chart," and "Match Map"

## Match Chart

The Match Chart will display the trends of how often the user has eaten out at a restaurant and the type of food they have eaten.
